DRM: Die roll modifier.

Finished Leader: A leader who has previously been activated that Game Turn and is "Finished", and (normally) may not be activated again. Leaders may be Finished for other reasons, such as failure to Trump, etc.

Inactive Leader: A leader who has yet to be activated and is still eligible to be activated.

Leader: Interchangeable with the word "Commander". Leaders were the generals, consuls, tribunes and kings who commanded and influenced the troops.

Line: All units that are listed on a specific battle's Line Command Eligibility chart as eligible to move under a single Line Command.

MA: Acronym for a unit's basic Movement Allowance. It also represents a unit's maneuverability *vis-à-vis* the other units in the game.

Missile Fire: Friendly units throwing javelins, shooting arrows, or slinging stones at enemy units.

Momentum: The mechanic by which a leader can undertake more than one Orders Phase in a Game Turn.

MP: Movement Point.

Order/Line Command: The two methods leaders have of getting their troops to move and fight. Individual Orders (IO) apply to individual units, Line Commands (LC) to entire lines of units. In terms of whether a leader can issue an Individual Order or a Line Command, they are treated separately. For the sake of brevity, the word "orders" will mean either a Line Command or Individual Orders.

Orders Phase: The period during a Game Turn when a leader gives orders to his troops to move and fight.

Shock Combat: Hand-to-hand, (and, often literally, eyeball-to-eyeball), hack and thrust, slash and crash, melee.

Size: Representing the number of men in that unit. The Size of Skirmishers (invariably a 1) does not represent numbers (which are typically low, anyway), but rather the fact that that unit is deployed dispersed (with little formation) so that numbers have no effect on that unit's strength.

Superiority: The relative capabilities and "killing" effectiveness of the opposing weapons/armor system, augmented by that unit's training and experience (for cohorts). Superiority, when achieved, will substantially increase an opponent's losses in cohesion.

TQ: Acronym for the all-important Troop Quality rating. The TQ Rating is, by far, the most important number a combat unit has. It will be consulted whenever a unit does something that will endanger its cohesion. The Cohesion Hit and TQ Check Chart (8.75) summarizes when a player uses the TQ Rating.

Trump: The mechanic by which an enemy leader can stop a friendly leader from undergoing an Orders Phase and transfer that phase to that enemy leader. It can also be used by a friendly leader to go before another, but lower-rated, friendly leader.

Type: General, categorical description of combat unit, usually used to determine combat effectiveness and results. *Examples: HI (Heavy Infantry), SK (Skirmishers), etc.*

Zone of Control (ZOC): The hexes—usually directly to the front of a unit—into which that unit exerts, by its presence, enough "influence" to inhibit freedom of movement.

Knowledge of the following types of combat units/terms will be useful for play.

Consular Army: The basic field force in the Republican era. There were two consuls for each year, and each was assigned an army that consisted of two legions (usually) and two corresponding alae. This legion-ala organization is usually called a "double legion". The modern equivalent would be a four-division corps, with a working strength of around 19,000 troops, led by a consul. Unfortunately, consul was a political office that required (at the time) little military skill, a fact often revealed on the battlefield. Although citizens-derived, the legion was a well-trained, professional force, as were the equivalent alae. The difference between success and failure often lay not in the troops and the manipular system, but in how they were used by their commanding consuls. The Roman armies did not come into their own until the military skills and insight of Scipio Africanus (Publius Cornelius Scipio) were brought to bear.

Legion: The word derives from the Latin for "levy". Each legion was drawn from Roman citizens, and, for battlefield purposes, was composed of four separate lines, men being assigned to each of the lines according to their class status in Roman society (a distinction that was gradually eroded over the period of the game).

Velites: Light infantry with helmet and a shield. Although they had swords, their basic weapon was the javelin, and they were used as skirmishers to harass the enemy and disguise movements.

Hastati: The second line of troops had light body armor and the highly identifiable Roman shield (scutum) of the period. In combat they would, on command, clash their shields and javelins together while raising a clamorous hue, begin to move forward until they were about 75 yards from the enemy line, at which point they would break into a fast trot, throw their pila (javelins) and then smash into the enemy, using their swords for the deadly in-fighting. The Roman sword (gladius)—sometimes known as the "Spanish Sword"—was a particularly effective weapon capable of causing grievous wounds. The Greeks thought it was unfair. Ironically, the unit's name comes from the word for spear, hasta, which they no longer used.

Principes: The third line in the manipular legion—and the best troops (from the highest class)—they were essentially armed in similar fashion to the Hastati (however see the note above on weaponry in the legion). Essentially, attack and destroy troops.

Triarii: The rear defensive line of the legion, the Triarii was essentially the vestigial remains of the old defensive-style Phalanx. They were spear-armed
