EXAMPLE: [Cannae] A Velites unit is in hex 2719. A Phalanx is in hexes 2620/2621, with the part that is in 2620 in the Roman ZOC. That Phalanx may pivot 2621 to 2720 (while the 2620 portion remains in place), paying 1 MP. It incurs 1 Cohesion Hit for the front-to-flank and then (with a 6 TQ) undergoes a TQ check. If the DR were, say, a 5, the Phalanx would incur another 1 Cohesion Hit, for a total of 2; if the DR were an 8, 2 Cohesion Hits for a total of 3.
