- the unit is in the ZOC of only one enemy combat unit, *and*
- there are no enemy combat units in the unit's ZOC, *and*
- the unit remains in the hex during that Movement/Missile Segment; it cannot use 7.23 bullet #1 to leave the ZOC.

Exception: The ZOC of an enemy unit that cannot Shock is ignored for purposes of bullet #1.

DESIGN NOTE: We have relaxed the "never change facing in an enemy ZOC" mandate of the prior editions, now allowing a unit not engaged to its front or attacked from multiple directions, to turn and face attacks from the flank/rear.

7.25 If opposing units extend a ZOC into the same hex, they are both considered to control that hex.

7.3 SHOCK REQUIREMENTS

Whether a combat unit must attack an enemy unit depends both on its unit Type and if the unit moved, shock being a question of inertia more than weaponry.

7.31 In the Shock Combat Segment, all friendly "heavy" units—those whose Type is marked with a plus sign (+) on the Shock Superiority Chart—that *moved adjacent* to an enemy unit from a non-adjacent hex during the preceding Movement and Missile Fire Segment must Shock attack all enemy units in their ZOC. All other "light" Shock-capable units—no plus sign (+)—that moved adjacent to an enemy unit from a non-adjacent hex during the preceding Movement and Missile Fire Segment *may choose* to Shock attack all enemy units in their ZOC in the ensuing Shock Combat Segment.

7.32 The moving player places a SHOCK MUST CHECK TQ marker on top of each unit that either must Shock attack in the ensuing Shock Segment, or that he chooses to Shock attack (7.31). These markers are placed the instant the moving unit moves adjacent, and before any Reaction Fire, to delineate which units will have to undergo a Pre-Shock TQ check (8.43).

EXAMPLE: A Macedonian Phalanx moving adjacent to a Roman Hastati unit has a SHOCK MUST CHECK TQ marker placed on top of it because it must attack (7.31). A Numidian Light Cavalry unit moving adjacent to a Principes unit does not have to Shock attack; however, the moving player must state his decision on whether to do so as it finishes movement. If he wishes it to attack, he places a SHOCK MUST CHECK TQ marker on top of the unit.

7.33 Any unit issued a Fire order or issued a Move order where 7.31 does not apply, or those simply within the activated leader's Command Range that he can command, *may choose* to attack all enemy combat units in their (friendly) ZOCs. These units are given a SHOCK NO TQ CHECK marker in the Shock Designation step (8.41), to indicate they are going to Shock attack but do not have to make a Pre-Shock TQ check. See the introduction to 8.4.

Exceptions:

- Skirmishers, Scorpios, Light Infantry Archers, and Light Cavalry Archers are not Shock-capable and can never Shock attack.
- Routed units and units In Column can never Shock attack.
- Velites units can only Shock attack into a Front hex.

When using the Engaged rule (10.4), SHOCK NO TQ CHECK markers are required for friendly Engaged units within range of the activated leader regardless of command restrictions.

PLAY NOTE: And no, you cannot place a SHOCK NO TQ CHECK on a "light' unit that chose not to Shock when it moved; it gets a SHOCK MUST CHECK TQ. No avoiding the Pre-Shock TQ Check.

8.0 COMBAT

There are two kinds of Combat: Missile and Shock. Missile Combat occurs as part of—or instead of—movement at any point during the Movement and Missile Fire Segment of an Orders Phase. Shock Combat comes in its own segment which occurs after all orders have been issued and movement is completed. A missile unit can participate in both types of combat during the same Orders Phase. In Shock Combat, the Type, Size, and Troop Quality of a unit are considered. The effects of combat are Cohesion Hits, which may result in a unit being Routed.

8.1 MISSILE FIRE

HISTORICAL NOTE: Missile units, with their lower TQs and susceptibility to shock by heavier units, appear to be "weak" units. However, they have two abilities which make them quite useful: they can (usually) fire during movement and most can use Harassment & Dispersal fire. Their combat effectiveness was limited, though, because of a lack of penetrative capability—a problem that would remain until the inventions of the crossbow and the Welsh longbow.

8.11 Units with Missile Capability (see sample units) may use Missile Fire. There are four classes of missile units: Archers (A), Slingers (S), Javelinists (J), and Scorpios. When given an order, an individual missile unit can fire at any time before, after, during—or instead of—movement. If a missile unit moves, it may only fire if it moved "forward" (closer to the target) immediately preceding the fire. Firing during movement does not cost any movement points. Each unit ordered may only fire once per Orders Phase.

Exception: Light Infantry Archers (LI Class A) and Scorpio units can either move or fire, never both in the same Orders Phase. Scorpio units do not use orders to fire (9.85).

HISTORICAL NOTE: The Roman javelin was a pilum; however, we have stuck with javelin for a variety of reasons.

EXAMPLES: A mounted archer may move 4 hexes forward, fire at an enemy 2 hexes away, and then use its remaining points to ride away. A slinger could move 3 hexes forward, let loose a stone at a range of 2 hexes, and then continue its move by moving away.
