8.12 Missile Fire may occur because of an order (8.11, 8.3), or as a reaction to enemy actions (Reaction Fire, 8.2), or as part of an Orderly Withdrawal by Mounted Archers (6.55). For Scorpio fire, see 9.85-9.86.

8.13 A Missile unit may fire at any single enemy target unit which is within its Missile Range and to which it can trace a Line of Sight (8.14) through one of its Front or Flank hexes. Missile units must fire individually; they may not combine fire. If there is more than one combat unit in the target hex, the top unit is affected if fired at through a Front or Flank hex, and to the bottom unit if fired through a Rear hex.

8.14 A missile unit can only fire at an enemy target unit to which it has an unobstructed Line of Sight (LOS). A LOS is calculated by tracing a path of hexes between the center of the hex the missile unit is in and the same for the target unit, through the firing unit's front or flank hexsides. LOS is blocked by woods, towns, and combat units (but not leader elephants alone), unless they are in hexes at a lower elevation than both the firing unit and the target. LOS is also blocked if any part of a hex of higher elevation is between the two units. If the LOS goes down a hexside between blocking/non-blocking hexes, consider it blocked. Missile units, however, can always fire into adjacent hexes.

Exceptions:

- If the firing unit is an Archer (Class A), LOS is not blocked by a combat unit if the combat unit is closer to the firing unit than the target (halfway is not closer).
- When tracing a LOS to determine Line Commands, Elephant units do not block LOS.

PLAY NOTE: LOS, while not a major problem in most of these battles because of the flat terrain, is often a cause of "player tension".

8.15 Missile Fire Resolution: The Missile Range and Results Chart (MRRC) is used to determine the effect of Missile Fire. Each missile unit has a missile strength which varies with the range, as given on the chart. For each Missile Fire, a die is rolled. If the DR is equal to or less than the strength of the missile unit at that range, then the target unit receives 1 Cohesion Hit (2 Cohesion Hits in certain cases). Adjustments to the DR are listed on the MRRC. All DRMs are cumulative unless noted otherwise on the chart. All combat effects from missile combat are immediate and occur before any other unit is moved or fires.

The DRMs are self-explanatory, with the following exception that the moving penalty does not apply to a facing change while remaining in the hex. It does apply to Harassment & Dispersal fire.

DESIGN NOTE: There is no penalty for moving foot javelinists, who use movement to gain momentum for their missiles. If you want to be technical, play that they do not get the penalty only if all movement is/was forward. Remember, foot units and mounted javelinists may not fire during Orderly Withdrawal. Javelinists are also penalized less when firing through the front of Phalanx/Heavy Infantry units. This represents the fact that the lighter shafts of the skirmisher-type archers and slingers were most effective against the formidable shield-wall and body armor of the heavy infantry when firing "from above" into the body of troops; at point-blank range they could not do that.

EXAMPLE: [Cannae] Balearic slingers are 2 hexes distant from a Roman cavalry unit. At a range of 2 hexes, the slingers' Missile Strength is 2. The Carthaginian player fires at the Roman unit, rolling a 2. The Roman cavalry incurs 1 Cohesion Hit. If the slingers had moved to get within range, the +1 DRM for moving would have caused the fire to be ineffective. If the player had rolled, say, a 6, the fire would have had no effect. If he had rolled a 9, it would have had no effect AND he would have had to place a MISSILE LOW marker (8.17) on the slingers.

8.16 Extended Range: When a missile unit fires at a target unit on a lower elevation, its range is increased by 1 hex. When firing at Extended Range, the unit requires a DR of 0 to inflict a Hit.

8.17 Missile Supply: A Missile units may keep firing until it runs out of missiles. Each different missile type has its own availability level:

- Archers, Slingers, and Elephant Screens become Missile Low whenever there is an *unmodified* DR of 9 when resolving any Missile Fire, at which point place a MISSILE LOW marker on the unit, indicating it has one fire remaining.
- Javelinists, other than LG type units, become Missile Low whenever there is an *unmodified* DR of 7, 8 or 9 when resolving any Missile Fire, at which point place a MISSILE LOW marker on it, indicating it has one fire remaining.
- Legion Infantry (LG) are automatically out of missiles after the first time they fire. Place a MISSILE NO marker on the firing unit.
- Any javelin-armed *infantry* unit involved in Shock Combat is automatically MISSILE NO upon completion of Shock Combat.
- If a MISSILE LOW unit fires, flip the marker over to its MISSILE NO side to indicate there are no missiles left to fire.
