DESIGN NOTE: We have departed from conventional "wisdom" here and adopted the premise put forth by Peter Connolly concerning how many pila the Hastati and Principes used. Almost all sources state that the Hastati and Principes "carried" two pila— usually two different pila, one light, one heavy. However, the key word is "carried"; they do not say "used" or "fired". With this in mind, and following Connolly's argument, we did a little Delbruckian experimentation, and it is our (and PC's) opinion that the Hastati and Principes could not have held their scutum in one hand and thrown a pilum with the other while also holding onto a second pilum. Try it—it just doesn't work! It is more likely that the Hastati and Principes were simply carrying the second pilum as "ammunition"—either for themselves, later, or for the Velites, who could pick up these extra pila when they retired back through the Hastati line at the beginning of the battle (their pila supply having been exhausted.) The artistic depiction of a Hastati in "Great Battles of the Great Commanders" shows the larger pila attached directly to the scutum. Possible but it does look like it would retard mobility. Moreover, that larger pilum may have been more a spear than a javelin. Interesting question... no easy answers.

PLAY NOTE: The sheer number of single shot LG units will generate a significant amount of counter clutter and tax even the most generous supply of Missile Low/No markers. Rather than using 8.17, treat LG units as having missiles unless:

1) they started the segment adjacent to an enemy unit, or

2) they are marked with a MISSILE NO marker. A MISSILE NO marker, however, is not placed when a unit fires, but rather at the instant the unit is no longer adjacent to an enemy unit. A MISSILE NO marker is removed when the unit is once again adjacent to an enemy unit after all fire is resolved (it is no longer needed), or per the reload rule (8.18).

In those cases where becoming adjacent to an enemy unit did not result in Shock Combat or Missile Fire, use a MISSILE LOW marker to indicate that the unit has missiles even though adjacent to an enemy unit.

8.18 Any friendly unit with MISSILE LOW or MISSILE NO may remove its MISSILE LOW/NO marker during the Reload Segment of the Rout and Reload Phase, bringing it up to full missile capability if:

- it is not in an enemy ZOC, *and*
- it is not in missile range and in LOS of an enemy unit that has missiles and is able to fire.

8.19 Leader Casualties: If there is a leader in the hex fired at, and the *unmodified* Missile Fire DR is 0, there is a possibility that the leader has been hit. Roll the die again. If the die roll is 1-9, nothing has happened; if the DR is 0, the leader has suffered a "casualty". See 4.73 for the procedure. Players may, if they wish, fire at a hex in missile range in which there is only a leader counter.

8.2 REACTION FIRE

Missile units may fire in reaction to certain enemy movements into (Entry Reaction) and out of (Retire Reaction) their ZOCs, and against enemy units that use Missile Fire against them (Return Fire). Rampaging Elephants do not draw Reaction Fire of any kind.

8.21 Entry Reaction: Whenever a friendly unit enters the ZOC of an enemy missile unit—and this includes entry because of Advance after Combat (8.5)—that enemy missile unit may fire at the entering unit (range: 1 hex) before any further movement or friendly fire occurs. Enemy units that attempt a Reaction Facing change (7.15) may fire if the triggering unit is in its ZOC.

Exception: When friendly units are moving as a Line, all movement is completed before any Entry Fire takes place, and all Entry Fire takes place before any fire by any of the moved units. A unit may fire at only one unit that enters its ZOC.

8.22 Retire Reaction: Whenever a friendly unit leaves the ZOC of an enemy missile unit, that missile unit, if it has a missile range of 2+ hexes, may fire at the moving unit. Any results are applied before the unit moves. All Retire Reaction fire is always at a range of 2 hexes.

Exception: Routed units executing their initial rout move (10.22) do not trigger Retire Reaction Fire.

8.23 Return Fire: Any inactive unit that is fired at may fire back at the enemy unit that fired at it, after the active unit's fire is resolved. Return fire is not simultaneous. The inactive player cannot use Return fire if it used Entry Reaction Fire against that same firing unit.

8.24 Reaction Fire does not require an order; it does require that the missile units have sufficient missiles available to fire. A unit may perform Reaction Fire any number of times during enemy movement, if it has missiles available.

8.25 The only time Elephant Screens may fire is as Reaction Fire (any type).

8.3 HARASSMENT & DISPERSAL

HISTORICAL NOTE: This is the main tactic of Light Cavalry, Light Infantry and Skirmisher type units.

8.31 Missile-armed Skirmishers (SK) and Light Infantry (LI) may use Harassment & Dispersal fire (H&D) against any enemy unit that has the *same or lower* Movement Allowance (MA). Missile-armed Light Cavalry (LC) may use H&D against any enemy unit that has a *lower* MA. H&D fire requires a move order, is movement for purposes of Missile Fire modifiers, and consumes the unit's entire MA.

Exceptions:

- Skirmisher and Light Infantry Archers (Class A) cannot use H&D fire.
- Light Cavalry (all missile classes) cannot use H&D against Skirmishers.
