8.32 To use H&D, Light Cavalry (LC) must be within 4 hexes, and infantry types within 2 hexes of, *but not adjacent to,* the target, and cannot be in an enemy ZOC. The unit must have a LOS to the target and be able to trace a path of hexes through its Front hexes (only) clear of any combat units and enemy ZOC unless that ZOC is adjacent to the target. The path may not be traced through an impassable hex, Rough terrain hex, or up/down a hexside of more than 1 level of elevation change. It may cross a Stream.

8.33 If the unit satisfies the conditions in 8.32 above, it may fire its missiles against the selected target. The procedure is:

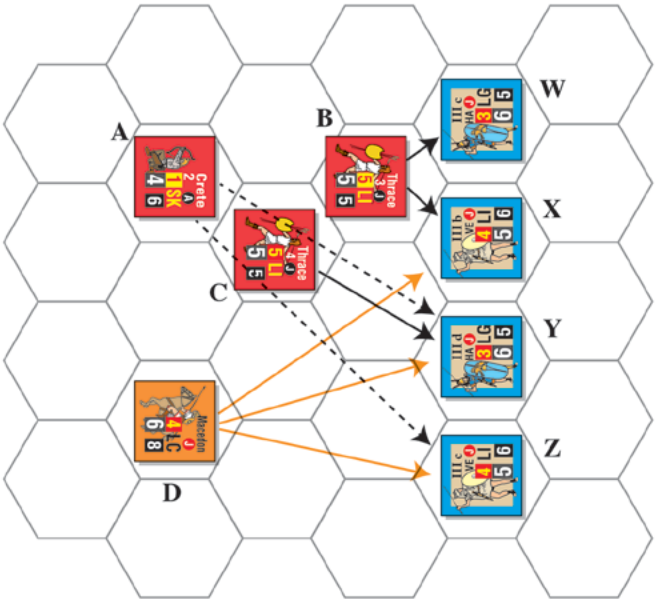

- Note which unit is using H&D, *then*
- Note the target, as above, *then*
- Fire the missiles as if they were being fired at 1 hex range. This is a moving attack.

The target unit may change facing in reaction (7.15/7.16). The target and any other friendly unit may use Entry Reaction Fire (8.21) if the path is traced through an adjacent hex in its arc of fire (8.13). However, all fire is treated as simultaneous in this situation.

All of this occurs without physically moving the counter on the map. However, it is moving for purposes of 6.13.

DESIGN NOTE: Well, it is moving (to the target and then back from whence it came). We just eliminated the micromanagement. This rule simulates the ability of a light unit to close on a unit (around 30 yards), throw missiles, and then swiftly withdraw without getting entangled in Shock Combat.

8.34 Light Cavalry may use H&D fire against Elephants; however, the restrictions in 9.15 apply. Therefore, cavalry H&D fire is not allowed through an Elephant's Front hex. A cavalry's H&D attack through a Flank/Rear hex earns 2 Cohesion Hits that are applied prior to any Missile Fire.

*EXAMPLE: [Beneventum] The Crete Archer A may fire at Roman units **Y** and **Z** (dashed arrows). The range is 3 and 4 respectively.*

*Since **A** is an archer, it may fire over the Thrace Peltast **C** because that potentially blocking unit is closer to the archer unit than either of the targets. The Thrace Peltast **B** unit blocks **A's** fire at **W** and **X** since **B** is closer to those targets than to the archer.*

*Thrace Peltast **B** can fire at either Roman unit **W** or **X** at a range of 1. The Roman unit that receives the fire may Return Fire at range 1 after **B's** fire is resolved. The other has no Reaction Fire opportunity.*

*Thrace Peltast **C** has no target in range for regular Missile Fire but can use H&D fire from a range of 2 hexes (black arrow). **C** does not have a LOS to Roman unit **X** since the LOS goes down a hexside between blocking/non-blocking hexes. **C** does have a LOS and clear path to Roman unit **Y** so can use H&D fire resolved at range 1. Note the javelinists are not penalized for moving. Both **X** and **Y** may use Entry Reaction Fire at range 1 against the H&D fire, but the fire is considered simultaneous as opposed to being resolved first.*

*The Macedon LC **D** has no target in range for regular Missile Fire, but all Roman units are within 4 hex range for H&D fire. However, **D's** LOS and path to Roman unit W is blocked by two friendly units. **D** does have a clear LOS and path to Roman units **X, Y,** and **Z** (orange arrows). **D's** Missile Fire against any of the targets would be at range 1, with a +1 DRM since the Macedon LC is mounted and is considered moving for H&D fire. Targeting **Z** is advantageous because **D** can trace a path such that only the target unit is able to Reaction Fire. An attack on **X** or **Y** would draw an additional Reaction Fire from **Y** or **Z**. Whichever Roman unit is chosen as the target may use Entry Reaction Fire in response.*

8.4 SHOCK COMBAT

DESIGN NOTE: This section is the heart of the game; thus, we have gone to great lengths to explain how things work. It is longer and more detailed than other sections and may appear somewhat daunting. Take heart: in practice/play, most of the mechanics become self-evident and, after a few trial runs, the resolution of Shock will become second nature.

PLAY NOTE: The Shock system relies on the interaction of the units' weapons, armor protection, size, angle of attack, and troop quality (TQ), to produce a single result. While no factor is unimportant, the rating to pay closest attention to is the TQ, for that rating determines the ability of a unit to withstand the rigors of toe-to-toe ancient warfare.

PROCEDURE

Shock Combat takes place in the Shock Combat Segment. Shock is part of a leader's Orders Phase, and all Shock precipitated by that leader is resolved before the next leader may be activated or Momentum attempted.

IMPORTANT: Each Shock Combat is conducted as a series of steps performed in order, for all units participating in Shock Combat. Thus 8.43 is completed for all involved units, then 8.44 for all involved units, etc.
