classes of missile units: Archers (A), Slingers (S), Javelinists (J), and Scorpios. When given an order, an individual missile unit can fire at any time before, after, during—or instead of—movement. If a missile unit moves, it may only fire if it moved "forward" (closer to the target) immediately preceding the fire. Firing during movement does not cost any movement points. Each unit ordered may only fire once per Orders Phase.
