PLAY NOTE: We suggest undertaking each separate step from left to right, across the map. Players may use any system they wish to note what has happened up and down the lines of attack. Players may treat 8.45-8.46 as a single step to speed play.

DESIGN NOTE: It would be easier to resolve each separate combat as one "piece". However, to do so creates a "blitzkrieg" type of effect, wherein the attacker gets to choose which attacks he wants to do first so that he can achieve "breakthroughs". Despite its simplicity, this would be so far from reality as to render the system—and the game—inaccurate; however, isolated shocks can certainly be resolved as a piece, if doing so would not affect other attacks. The method you choose should keep this intent in mind.

8.41 Shock Designation: Place SHOCK NO TQ CHECK markers on non-moving units that choose to Shock per 7.33 (units that have moved will already have SHOCK MUST CHECK TQ markers). Only those units with Shock markers may Shock attack.

8.42 The Basic Pre-Shock Procedure: Units that attack by Shock must attack all units in their ZOCs, unless a defending unit is being attacked by another friendly unit in that same Shock Combat Segment. The attacker designates which units will be

SHOCK RESOLUTION

An Overview of the Shock Combat Resolution Procedure.

Sections 8.43 through 8.47 are descriptions of the sequence and procedure used to resolve Shock Combat. These steps are:

1. Attacking units with a SHOCK MUST CHECK TQ marker and their defenders undergo a Pre-Shock TQ check (8.43).
2. Check for Leader casualties (8.44).
3. Use Clash of Spears and Swords Chart to determine which column on the Shock CRT will be used (8.45).
4. Determine whether terrain, leaders, and/or relative strengths and capabilities will have any effect (8.46).
5. Resolve the Shock using the Shock CRT (8.46).
6. Check for Rout (8.47).

8.43 The Charge: All units with a SHOCK MUST CHECK TQ marker *and* their intended targets undergo a Pre-Shock TQ check, with the players rolling a die for each unit (all such checks being simultaneous). Attacking units with SHOCK NO TQ CHECK markers—and *their* defenders—do *not* undergo this TQ check. If a unit is attacked by both types of units (Shock Check and Shock No Check), the defender then checks TQ.
