PLAY NOTE: We suggest undertaking each separate step from left to right, across the map. Players may use any system they wish to note what has happened up and down the lines of attack. Players may treat 8.45-8.46 as a single step to speed play.

DESIGN NOTE: It would be easier to resolve each separate combat as one "piece". However, to do so creates a "blitzkrieg" type of effect, wherein the attacker gets to choose which attacks he wants to do first so that he can achieve "breakthroughs". Despite its simplicity, this would be so far from reality as to render the system—and the game—inaccurate; however, isolated shocks can certainly be resolved as a piece, if doing so would not affect other attacks. The method you choose should keep this intent in mind.

8.41 Shock Designation: Place SHOCK NO TQ CHECK markers on non-moving units that choose to Shock per 7.33 (units that have moved will already have SHOCK MUST CHECK TQ markers). Only those units with Shock markers may Shock attack.

8.42 The Basic Pre-Shock Procedure: Units that attack by Shock must attack all units in their ZOCs, unless a defending unit is being attacked by another friendly unit in that same Shock Combat Segment. The attacker designates which units will be involved in each individual combat resolution, within the following restrictions:

- A unit may attack only once per Shock Combat Segment.
- A defending unit may be Shock attacked only once per Shock Combat Segment—Cavalry Pursuit (8.6) being an exception.
- A friendly unit may attack more than one unit if the targeted defenders are all in the attacking unit's ZOC.
- An attacking unit (even a Phalanx unit) may not split its attack capabilities, although two (or more) units may combine to attack *one* defending unit/stack.
- If more than one unit is defending and/or attacking, total the Sizes.
- Stacked units must Shock attack the same hex.

Other than the above restrictions, the attacking player may divide his attacks amongst his units as he sees fit.

EXAMPLE #1: [Cannae] A Phalanx unit in 3722/3822 has three Velites units in each of its three frontal hexes (3622/3721/3821). It must attack all defending units (which total their Size) as one unit. If a Celtic Infantry unit was in 3920 and capable of attacking the Roman unit in 3821, the Phalanx would have to engage only the other two Velites. Or, unless the Celts had a Shock marker, they could sit this one out while the phalangites took care of everyone. While the former will produce better results, the latter may be necessary if the Celts are close to their TQ limit in Hits.

EXAMPLE #2: [Cannae] A Roman Cavalry unit in 2419 moves adjacent to a Balearic Slinger in 2518. Unfortunately for the poor slingers, there is also a Hastati unit in 2618. The Roman player may either combine the cavalry and infantry in the attack if the stationary Hastati receives a Shock marker, or have the cavalry attack (as it must) alone and the adjacent Hastati sit by and watch.

SHOCK RESOLUTION

An Overview of the Shock Combat Resolution Procedure.

Sections 8.43 through 8.47 are descriptions of the sequence and procedure used to resolve Shock Combat. These steps are:

1. Attacking units with a Shock Must Check TQ marker and their defenders undergo a Pre-Shock TQ check (8.43).
2. Check for Leader casualties (8.44).
3. Use Clash of Spears and Swords Chart to determine which column on the Shock CRT will be used (8.45).
4. Determine whether terrain, leaders, and/or relative strengths and capabilities will have any effect (8.46).
5. Resolve the Shock using the Shock CRT (8.46).
6. Check for Rout (8.47).

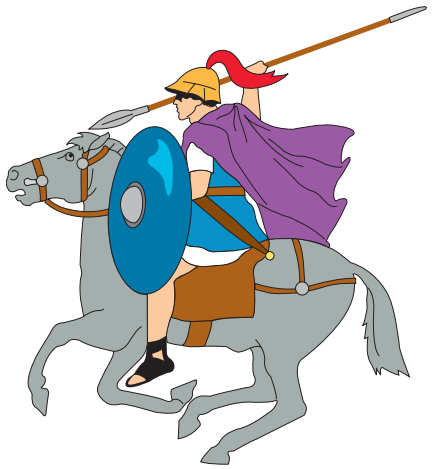

8.43 The Charge: All units with a SHOCK MUST CHECK TQ marker *and* their intended targets undergo a Pre-Shock TQ check, with the players rolling a die for each unit (all such checks being simultaneous). Attacking units with SHOCK NO TQ CHECK markers—and *their* defenders—do *not* undergo this TQ check. If a unit is attacked by both types of units (Shock Check and Shock No Check), the defender then checks TQ.

The following units do not make a Pre-Shock TQ check:

- Any unit attacking a Skirmisher (SK) unit.
- Any unit attacking a Routed unit.
- Phalanx (PH), Heavy Infantry (HI), and Legion Infantry (LG) that are attacked frontally by Light Infantry (LI).

If the DR is *higher* than a unit's TQ, the unit incurs Cohesion Hits equal to the difference between the DR result and its TQ:

- If a *defending* unit has accumulated Cohesion Hits equal to or greater than its TQ Rating, it immediately routs per 10.21. (see exception below). An attacking unit must advance (8.5) unless it is in the ZOC of another enemy unit.
- If an *attacking* unit has accumulated Cohesion Hits equal to or greater than its TQ Rating, it immediately routs per 10.21 (see exception below); the defender(s) does not advance.
- If *all attacking and defending units* involved rout from their TQ checks, use the procedure in 10.15 to determine which units will rout.
