The above DR is modified as follows:

+1 for an Elephant unit that attacks a Phalanx (PH) or Heavy Infantry (HI) through a Front hex.

+1 for an African Elephant attacking or defending against an Indian Elephant unit.

+1 for a unit that is attacked by Double Depth Phalanx unit.

–1 for a Double Depth Phalanx that is attacked by any unit.

–1 for a Barbarian Infantry (BI) unit with Ferocity (9.94).

+2 For a unit attacked by a Barbarian Infantry unit with Ferocity (9.94).

Exception: If a two-hex Phalanx unit would rout, the owning player first rolls the die, adding to that DR the number of Cohesion Hits the unit has incurred more than its TQ, and an additional 3 if that unit was an *attacker* in the combat. If the modified result is higher than the unit's TQ, the unit routs per 10.21; otherwise, it stands in place with its Cohesion Hits set equal to its TQ minus 1.

After all Pre-Shock TQ checks, if at least one attacker and one defender in the same combat did not rout, go to the next step.

8.44 Shock and Leaders: Use the procedure in 4.73 to determine if any of the leaders stacked with involved combat units suffer a casualty. The leader's Charisma is used as a DRM (for good or ill) regardless of the outcome (8.46[3]). Remember, though, that this is where you check to see if this happens.

8.45 The Clash of Spears and Swords: The Clash of Spears & Swords Chart is now consulted. Cross-index the attacking unit's Type with the defending unit's Type and its orientation relative to the attacker to determine which Shock CRT column (prior to any adjustments) will be used to resolve the combat. If there is more than one defending unit, the defending player chooses which unit will be used in the determination. Similarly, if there is more than one attacking unit, the attacking player chooses which to use for his Type and angle of attack. If a unit is being attacked through the vertex between different facings by a Phalanx unit, the defender gets the benefit of the most advantageous facing.

Units that are not Shock-capable defending in conjunction with Shock-capable unit types cannot be chosen.

EXAMPLE #1: A Phalanx attacking Light Infantry frontally would use Column 10 on the Shock CRT (before any adjustments).

EXAMPLE #2: A Carthaginian Heavy Infantry unit is attacking two units at once: one Hastati/Legion Infantry (through its flank) and one Velites/Light Infantry (frontally). The defender gets to choose the unit type; here he chooses the Velites, even though it is a "weaker" unit. Why? Firstly, using the Clash of Spears and Swords Chart, we will see that designating the Legion Infantry Hastati on its flank produces the 11 Shock CRT column, while the frontal attack against the Light Infantry Velites would force the attacker to use the 9 Shock CRT column. And, regardless of whom the defender chooses, the attacker has Attack Superiority, either because of type (Heavy Infantry vs. Light Infantry) or position (attacking the Hastati through its flank).

EXAMPLE #3: Two Roman units attack a Phalanx unit, a Velites unit from the front, and an Allied Heavy Cavalry unit through the rear. The Roman player would use the "HC attacking Phalanxes from the rear" to gain the far more advantageous column, 11, as well as gaining position Superiority for the rear attack.

8.46 The Hand-to-Hand Struggle: Players now determine the effect of any advantages either side has, then resolve the Shock Combat.

Step 1: Determine Superiority: There are two types of Superiority: Position Superiority and Weapon System Superiority. Either one side or the other may (but not must) gain superiority, either as Attack Superiority (AS) or Defense Superiority (DS). The players determine Superiority using the Shock Superiority Chart. In many instances there is no Superiority. Superiority is determined as follows:

A. Position Superiority: The attacking unit generally has Position Superiority if its attack is through a defending unit's Flank or Rear hex. However, whichever unit the attacking player uses to determine position superiority must also be the one used to determine the Shock column on the Clash of Swords chart per 8.45.

An attack does not attain Position Superiority if:

- a Skirmisher is attacked through a Flank hex, *or*
- a Cavalry unit attacks an Elephant unit, *or*
- an Elephant unit attacks another Elephant unit, *or*
- the attacking unit is in the ZOC of a Shock-capable enemy unit that is in the attacker's Flank or Rear hex.

In the above situations, Superiority will be determined by the Weapon System (8.46[1.B] below). If the attacking unit has Position Superiority, the attacking player gains Attack Superiority (AS) for that combat.

B. Weapon System Superiority: If no Position Superiority is attained, the players check the opposing units' weapon class relationship (see the Shock Superiority Chart, 8.72) to determine if either Weapon System is superior (either AS or DS) to the other. If more than one unit on either side is involved in the combat, the units chosen in 8.45 are used in the determination.

PLAY NOTE: Many different permutations and combinations are possible, in terms of unit types and multiple attack angles. The two precepts above should cover all these possibilities. If they do not, try to attain a result that best fits in with the general principles. If that does not work, try cutting open a chicken and checking its entrails...

Step 2: Determine Size Ratio Difference: Compare the total Size points of the attacking unit(s) to those of the defender(s). For each level of Size Ratio Difference (SRD) *greater than* 1 to 1 a unit has, it receives a Shock Results Table Column adjustment of one in its favor. The attacker adjusts to the right, the defender to the left. Reduce all size ratios to a #–1 (or 1–#), rounding off as follows:

- If any attacker moved adjacent to the defender from a non-adjacent hex, round off in favor of the attacker. Thus a 5 Size unit attacking a 4 Size unit is 2–1; a 4–5 is 1–1 and a 2–5 is a 1–2.
