Extended Shock Example—Bagradas Plains

Shock Designation: *The Carthaginian leader Bostar is active and has given Move orders to Carthaginian PH units **A** and **B**, which have moved to attack a line of Roman mixed unit types. Since the two Phalanx units are heavy types that moved adjacent to enemy units, they must Shock and so both receive SHOCK MUST CHECK TQ markers. As play moves to the Shock Combat Segment, the Carthaginian player can use Bostar to enable other units within his command range to Shock. The closer of the two Celts MI **C** is eligible, so the player decides to have it Shock and that unit is given a SHOCK NO TQ CHECK marker. The other Celts MI **D** is out of range so won't be involved in this Shock Combat Segment.*

Pre-Shock Procedure: *The Carthaginian player then must allocate his attacks. He will have the Phalanx A attack the Roman Velites T and both Roman CO - **U** and **V**, while Phalanx **B** attacks Triarii **W** and Velites **X** in its rightmost two controlled hexes. Alternatively, he could have had the Phalanx **A** attack **T** and **U** only and Phalanx **B** attack **V**, **W**, and **X** but that would be, as we will see, a less attractive attack. The Celts MI **C** has but one option and must attack both Roman Triarii **Y** and Velites **Z** in its ZOC.*

The Charge: *The players must now make Pre-Shock TQ Checks for the attacking units marked as with SHOCK MUST CHECK TQ markers and the defenders of those attacks. The Carthaginian player rolls a 6 and 7 for his units so neither is affected. The Roman player rolls a 5, 7, and 8 for **T**, **U**, and **V**. **T** is unaffected while **U** incurs 1 Hit and **V** 2 Hits. The rolls for the two units facing the Phalanx **B** are 9 and 0, so the Triarii **W** receives 3 Hits while Velites **X** is unaffected. Triarii **W** now has Hits equal to its TQ so it immediately routs and is moved 2 hexes toward the Roman retreat edge. Since Phalanx **B** has an enemy unit in its ZOC, it does not advance.*

Leader Casualties: *The Roman player has a leader involved in one of the Shock Combats, so he must make a leader casualty check. He rolls a 0 so his leader has become a casualty. The Roman player rolls again, this time it's a 5, so his leader is Finished for the turn.*

The Hand-to-Hand Struggle: *Starting with Phalanx **A**, the players consult the Clash of Spears and Swords Chart to determine the base column to be used on the Shock Combat Results Table. Phalanx **A's** attack is frontal but since there is more than one Type of defender, the Roman player gets to choose which to use. Of the two Types the LG is more advantageous to him with a base column of 7 and in looking at the Shock Superiority Chart, there is no advantage to either side. Moreover, since the attack is frontal, there is no Position Superiority. The players next determine the effect of the Size ratio. Phalanx **A** with Size 10 is exactly offset by the sum of the three Roman Sizes (4+3+3). There are no shifts, so Phalanx **A's** attack will be resolved on column 7. The Carthaginian player rolls a 6 which gives a "2(2)" result. Phalanx **A** incurs 2 Hits. The Carthaginian player decides to use the Phalanx special rule to allocate the Hits and gives both to Cohort **V** (now 4 Hits).*

*In Phalanx **B's** combat, now against Velites **X** alone, the Shock Column is 10. Phalanx **B** is Attack Superior to Velites **X** per the Shock Superiority Chart, so it will cause double the Hits in the attack. Phalanx **B** has a significant Size advantage over the lone Velites X; 10 vs. 3 or 3:1. The Size ratio adjustment is further*
