*rounded up to 4:1 since the Phalanx moved to the attack and so gives a 3 column shift to the right. The Carthaginian player rolls a 2 which on column 13 (base column 10 shifted 3 columns to the right for the Size advantage) gives a "2(3)" result. Phalanx **B** incurs 2 Hits while Velites **X** incurs 6 Hits, since the 3 result is doubled for Attack Superiority. Even though **X** has more Hits than its TQ, it does not rout yet.*

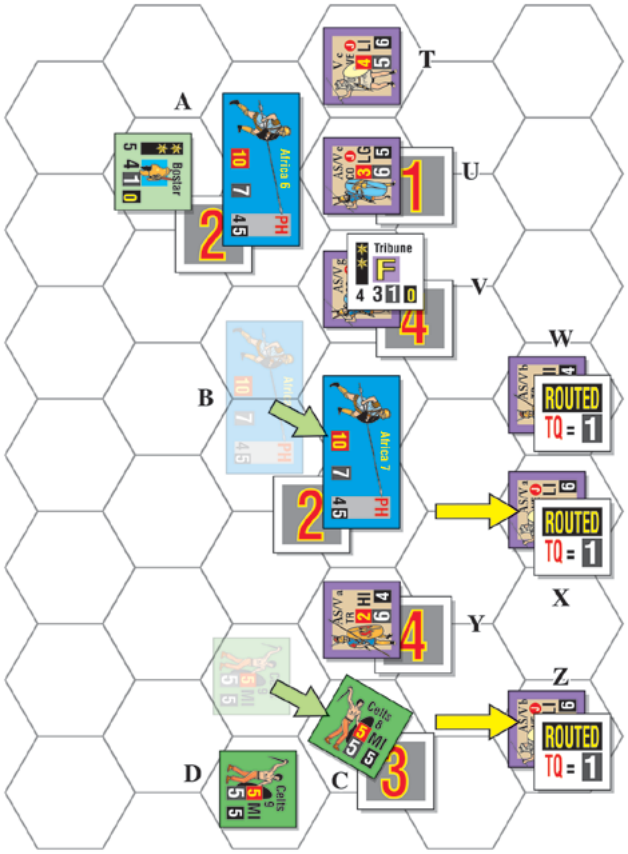

*Moving on to Celt **C's** frontal attack, the Roman player again has a choice of which Type to use and chooses the Triarii to lead the defense—base column 6 (MI vs. HI). A check of the Shock Superiority Chart shows no Weapon System Superiority. The Sizes are offsetting (5 vs. 3+2), and there are no other applicable shifts. The Carthaginian player rolls a 6, which on column 6 yields a "2(2)" result. Celt **C** incurs 2 Hits, while the 2 defender Hits are distributed evenly between the two units, each receiving 1 Hit.*

***The Collapse:** Both players now determine the effects of the Cohesion Hits on their units, starting with the Phalanx **A's** combat. Here no units have reached their threshold, so the players move to Phalanx **B's** combat. Velites **X** has exceeded its TQ threshold, so it routs per 10.21. The Roman player moves the unit 2 hexes in the direction of the Roman retreat edge. In Celt **C's** combat, Velites **Z** has Hit its rout threshold, so rout moves 2 hexes toward the Roman retreat edge.*

*Moving on to the next step in 8.47[2], Celt **C** is within one Hit of Rout and in the ZOC of the Triarii **Y**, so must check for rout. The Carthaginian player rolls a 5 and hence the unit passes the check and has its Hits reduced by one, down to 3.*

*Moving to the last step 8.47[3], the Phalanx **B** must advance with both halves of the unit entering new hexes, one of which was vacated by the defending unit. Celt **C** must also advance into the hex vacated by Velites **Z**. In doing so, it changes its facing by one vertex to set up a future flank attack on the Triarii **Y**.*

8.5 ADVANCE AFTER COMBAT

DESIGN NOTE: This rule (as well as 8.6) represents the inability of units to stop once they start a charge.

8.51 Attacking units and any leaders stacked with them must advance into any hex vacated by enemy units because of Shock Combat (8.43, 8.47), with the exception that an attacker in the ZOC of another enemy unit does not advance in the Charge step (8.43). Attacking units stacked together advance together, maintaining their stacking order. Advancing after combat does not require an order, but the advancing unit incurs all cohesion costs engendered by such a move. If the advance would rout (10.2) the moving unit, it advances and does not rout; the number of Hits it has is set equal to TQ minus 1.

DESIGN NOTE: This (and its sister rule, 10.15) was a point which both designers discussed for some time: the victorious unit that is about at the end of its line. After much debate, we decided that the immediate intangibles of victory would be enough to keep the unit from disintegrating. However, it would not save it from a subsequent Collapse Check in an enemy ZOC, where the euphoria of the moment would have worn off. Very subtle stuff here, indeed.
