8.52 Advancing non-Phalanx units may change their facing one vertex upon finishing the advance, even if they are in an enemy ZOC. This section takes precedence over—and is an exception to—7.24.

No Advance *Pivot Advance*

Advance *Advance with Wheel*

8.53 An advancing Phalanx unit must move forward with both halves of the unit into hex(s) vacated by enemy unit(s) provided that it is able to do so. If the unit cannot move forward as a whole, it does not advance. However, if there is an enemy unit in either its left or right front (not both), and the only vacated hex was its center front, the Phalanx unit must instead pivot using the Wheeling maneuver (6.44) into the vacated center front hex, paying all the associated cohesion costs from that maneuver. If it would rout, 8.51 applies. If the Phalanx unit was able to move forward and advanced as a whole, it may then perform a Wheeling maneuver if the opportunity for such presents itself if it pays all cohesion costs associated with that maneuver. In this case, if the unit would rout, it routs per 10.21.

8.54 If there are more attacking units and/or stacks of units than vacated hexes, the unit(s)/stack(s) that had Superiority (if any) must advance. If there is no such unit(s)/stack(s), those with highest TQ must advance. If it is a tie, the advancing player chooses. If there were more vacated hexes than attacking units, the advancing player chooses the hex(es).

8.55 The opposing player cannot use Orderly Withdrawal (6.51) in response to the advance but may change facing per 7.15-16 and/or use Entry Reaction Fire (8.21) if eligible.

8.56 There is no advance after Missile Fire, alone, regardless of what the target unit does.

8.6 CAVALRY PURSUIT

HISTORICAL NOTE: One of the problems with cavalry throughout military history is that it was often difficult to stop victorious cavalry from pursuing the fleeing enemy troops. (Some historians believe that Hannibal, wily fox that he was, counted on the superior Roman cavalry galloping off at Zama!) The telling factor in getting the runaway horse back into the battle was usually the level of leadership control.

PLAY NOTE: This rule is not used in Beneventum, which is why there are no Pursuit boxes on that map.

8.61 Attacking Cavalry units that rout the defending units during the Collapse step (8.47[1]) may pursue. Only victorious attacking cavalry units pursue—never victorious defending units. If more than one attacking cavalry unit is involved, only one of them will pursue, owning player's choice. There is no pursuit in the following circumstances:

- If the defending unit(s) routs from a failed Collapse TQ check (8.47[2]).
- If the defending unit(s) is surrounded by enemy units and/or enemy ZOC.
- If there are two defending units and only one routs.
- If the cavalry unit was Engaged (see 10.4) at the time of the rout.
- In any Shock Combat resulting from a Pursue result (8.62).

In the above cases, the victorious cavalry unit(s) Advances After Combat (8.5).

8.62 To resolve the pursuit, the owning player rolls a die and compares the result to the pursuing cavalry's TQ rating. If the DR is higher, the cavalry unit and any leaders stacked with it *must* **Pursue**, otherwise it *must* **Break-Off**. The procedures are:

Pursue: The pursuing cavalry unit moves toward the routed unit along its path of retreat. There is no MP cost to do so, but Cohesion Hits due to terrain apply. If all defender(s) were eliminated (Routed units, Skirmishers, etc.) the pursuing cavalry unit instead moves ½ of its MA (round up) if any of the defenders were infantry, full MA if all defenders were cavalry:

- In the direction the routed unit(s) was heading—pursuing player's choice if more than one direction, *or*
- In the direction of the opposing player's Retreat Edge if none of the eliminated units were already Routed.

The cavalry unit must stop if it enters an enemy ZOC or places an enemy unit in its ZOC. The pursuing player then resolves a Shock Combat (8.43-8.47) against all enemy units in its ZOC. If
