the pursuing unit is required to advance, it does not check again for Cavalry Pursuit. The cavalry unit advances per 8.5 unless all defenders were Routed at the start of the combat and eliminated, in which case the cavalry unit instead moves ½ of its MA (round up) or full MA in the same manner as bullet #1, above.

PLAY NOTE: This will usually place the victorious cavalry unit out of range of its leader, and the player must then decide what the best course is for this situation.

If the routed enemy unit moves off the map, the pursuing cavalry unit and any stacked leaders are placed off map. The exit hex for purposes of 8.64 is the hex where the routed unit left the map.

- **Break-Off:** The cavalry unit Advances after Combat (8.5).

8.63 Cavalry units that either Break-Off or Pursue are Finished for the Game Turn; they may not be ordered to move or fire but may recover Hits. They cannot Shock attack but may react (6.5, 8.2, etc.) and defend normally. Mark these units with a PURSUIT/FINISHED marker after resolving the Break-Off/Pursuit.

EXAMPLE: [Zama] A Hastati unit in hex 2728 is charged by Carthaginian HC (TQ=7) and routed. The Hastati retreats to 2527 and in checking for pursuit, the Carthaginian rolls a 8, and he is off in hot pursuit. The cavalry moves into hex 2628 and it attacks again, routing the fleeing Hastati unit, eliminating it. It then advances 4 MP in the direction the fleeing Hastati was headed.

PLAY NOTE: The routing player, where possible and reasonable, should have his fleeing units avoid contact with his own units. The key word is, of course, "reasonable" ... and, in cases of bitter dispute, the pursuing player's opinion overrides all. Try not to feel that you can use your fleeing units to lead enemy cavalry into some sort of "trap".

8.64 Off-Map Regroup. It is possible pursuing cavalry may end up off-map. They may not re-enter the game until the player uses his OC to declare that his entire Orders Phase is to Regroup and Return the cavalry (regardless of range or location). A cavalry Regroup and Return Order applies to all off-map cavalry from that army. It allows the off-map cavalry to re-enter the map within 2 hexes of the hex by which it left, using as much of their MA as they wish.

8.65 Cavalry units that are off-map because they pursued are not considered when determining Rout Points. Leaders that are off-map do not activate.

8.66 Cavalry Pursuit Option: Instead of using the TQ Rating to check for pursuit (8.62), use the following Pursuit Ratings and DRMs to determine if the cavalry unit pursues:

LC/LN: 5

RC/HC/BC: 3

DRMs:

+1 for Numidian LC.

+2 if any routed unit is infantry.

+/– Charisma Rating of any one leader involved.

–1 if the cavalry unit is in the ZOC of an enemy unit.

8.7 THE COMBAT TABLES

8.71 The Missile Range and Results Chart: This table is used to determine the strength of a missile unit firing at a given range.

8.72 The Shock Superiority Chart: This chart is used to compare the superiority (if any) of one type of unit compared to another, depending on which side is attacking or defending. Always read down the column—from the Attacker's point of view. (Reading across, by row, gives a "false" result.) Superiority is used to augment Cohesion Hits.

8.73 Clash of Spears and Swords Chart: This chart is used to determine which Column will be used on the Shock Combat Results Table (subject to adjustments).

8.74 Shock Combat Results Table: This Table is used to resolve Shock Combat in terms of Cohesion Hits to both attacker and defender. See 10.11 and 10.14.

8.75 The Cohesion Hit and TQ Check Chart: Use this as a summary of when Cohesion Hits are applied and when TQ checks take place.

9.0 SPECIAL COMBAT UNITS

9.1 WAR ELEPHANTS

HISTORICAL NOTE: Despite their drawbacks, war elephants were immensely popular from the era of the Diadochi (Alexander's successors) through the days of the Roman Republic (even the Romans used them—cf. Cynoscephalae— although not often). By the time of Pyrrhus, war elephants became equipped with "towers" and their compatriot cavalry had also become trained to work alongside them. Unfortunately, the flexibility of the Roman legion system eventually negated their advantages, leaving them with a host of disadvantages which doomed them as relics.

9.11 Elephant Pass-Thru: An infantry unit being attacked through one of its Front hexes by an Elephant unit marked SHOCK MUST CHECK TQ, may attempt to allow the Elephant unit to pass through its hex. This decision must be made prior to the Pre-Shock TQ Check die roll (8.43) and may be elected only if at least one of the defender's Rear hexes is unoccupied. Pass-Thru is *not allowed* if:

- an infantry unit is attacked through a Flank or Rear.
- an Elephant unit is attacking along with other units.
- the infantry unit was in an enemy ZOC at the start of the Orders Phase.

Pass-Thru may be used by two defending infantry units if both units meet the preceding conditions. If the player decides against Pass-Thru, Shock proceeds normally.

If the player decides to allow the Pass-Thru, do the following:

1. Apply a +1 DRM to the infantry unit's Pre-Shock TQ Check DR.
2. Proceed with the Shock resolution procedure but halve (round down) Cohesion Hits to the defending unit and reduce the Cohesion Hits to the Elephant unit by 1.
